RMA Wins Lighting Upgrade, Daylighting and Rooftop Photo-Voltaic System Project at Naval Air Station, North Island, California

Anaheim, Calif. (Oct. 15) - **RMA Land Construction, Inc., (RMA)** is supporting the Navy's ongoing energy conservation and sustainable initiatives on another energy improvement project under the previously awarded Small Business Multiple Award Construction Contract from Naval Facilities Engineering Command (NAVFAC), Southwest Division. The work will be performed at the existing Fleet Readiness Center located at Naval Air Station, North Island, California. The project entails the installation of new energy-efficient light fixtures, lighting controls, occupancy sensors, skylights, and exterior wall packs. RMA will also design and install a roof-mounted, grid-connected photo-voltaic system.

RMA Land Construction, Inc. is a design-build general contractor with 29 years of proven experience on various projects for the Federal government and Department of Defense (DoD) clients. RMA provides design-build management for a multitude of projects in globally diverse locations, including new vertical construction and renovation of administrative buildings, military barracks, hospitals, fitness centers, maintenance facilities and special ops facilities; high and low voltage electrical distribution; heavy and civil/horizontal construction; and maintenance and support services.
